Calpain (EC 3.4.22.17) large chain 3 - chicken

N.Alecrnate names: calpain p94 heavy chain; n-calpain-1 heavy chain
C.Species: dallus gallus (chicken)
C.Species: dallus gallus (chicken)
C.Species: dallus gallus (chicken)
C.Species: lo-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C.Accession: S57196

                                                                                                                                                                                                                                                                                                               calpain (BC 3.4.22.17) large chain 4 - chicken
Albarian catalytic chain; intermediate calcium activated neutral protei
C;Species: Gallus gallus (chicken)
C;Date: 17-May-1985 #sequence_revision 09-Aug-1997 #text_change 09-Jul-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Alpescription: catalyzes the hydolysis of peptides
Alpescription: catalyzes the hydolysis of peptides
Alpescription: catalyzes the hydolysis of peptides
Cidaves preferentially after tyrosine, methionine, or arginine residues and befor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 6
Bad488

calpain (EC 3.4.22.17) large chain 3 - rat

NiAlternate names: cysteine proteinase
Cyspecies: Ratus norvegicus (Norway rat)
Cyspecies: Ratus norvegicus (Norway rat)
Cyspecies: Ratus norvegicus (Norway rat)

Calpain (EC 3.4.22.17) large chain 3 - human

Calpain (EC 3.4.22.17) large chain 3 - human

Calpain (EC 3.4.22.17) large chain 3 - human

NyAlternate names: calpain chain L-3; calpain III catalytic chain; muscle specific, calc

C; Species: Homo saptens (man)

C; Date: 28-Apr-1995 #sequence_revision 09-Aug-1997 #text_change 09-Jul-2004

C; Accession: A55218; A34488

A, Cross-references: VINPROT: P06813; GB:M13364; NID:g164875; PIDN:AAA81565.1; PID:g164876 C; Complex: heterodimer of L (large) and S (small) chains
C; Complex: heterodimer of L (large) and S (small) chains
C; Function:
A; Description: catalyzes the hydolysis of peptides
A; Description: catalyzes the hydolysis of peptides
A; Description: catalyzes the hydolysis of peptides
A; Note: cleaves preferentially after tyrosine, methionine, or arginine residues and before; Superfamily: calpain small chain; calmodulin repeat homology

A Description: catalyzes the hydolysis of peptides
A Note: cleaves preferentially after tyrosine, methionine, or arginine residues and befor
C;Superfamily: calpain small chain, calmodulin repeat homology
C;Keywords: calcium binding; cysteine proteinase; duplication; EF hand; heterodimer; hydr.
C;Keywords: calcium binding; cysteine proteinase; duplication; EF hand; heterodimer; hydr.
C;Keywords: calcium binding; cysteine proteinase; duplication; EF hand; heterodimer; hydr.
C;Keywords: calcium binding; cysteine proteinase; duplication; EF P;137/Domain: calmodulin repeat homology <EF2>
F;237-268/Domain: calmodulin repeat homology <EF5>
F;237-268/Domain: calmodulin repeat homology <EF5>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

S38361
calpain (EC 3.4.22.17) II large chain - rat
NyAlternate names: calpain II 80% chain
C;Species: Rattus norvegicus (Norway rat)
C;Date: 31-Dec-1993 #sequence revision 02-Aug-1994 #text_change 09-Jul-2004
C;Accession: S38361, S08565, $39751
R;DeLuca, C.I.; Davies, P.L.; Samis, J.A.; Elce, J.S.
Biochim: Biophys. Acta 1216, 81-93, 1993
A;Title: Molecular cloning and bacterial expression of cDNA for rat calpain II 80 kDa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- SUBCELLULAR LOCATION: Cytoplasmic; Translocates to the plasma membrane upon Ca(2+) binding (By similarity).

- membrane upon Ca(2+) binding (By similarity).

- TISSUE SPECIFICITY: Ubiquitous family C2.

- SIMILARITY: Belongs to peptidase family C2.

- SIMILARITY: Contains 1 Calpain catalytic domain.

- SIMILARITY: Contains 2 EP-hand calcium-binding domains.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyzes limited proteolysis of substrates involved in cytoskeletal remodelling and signal transduction.

-!- CATALYTIC ACTIVITY: Broad endopeptidase specificity.
-!- COPACTOR: Binds 3 calcium ions.
-!- COPACTOR: Binds Activated by micromolar concentrations of calcium and inhibited by calpastatin.
-!- SUBUNTI: Forms a heterodimer with a small (regulatory) subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL; BC008751; AAH08751;

Sun W., Bidwell C.A., Ji S., Hancock D.L.;

Submitted (APR-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.

-!- CATALYTIC ACTIVITY: Broad endopeptidase specificity.

-!- CATALYTIC Binds 3 calcium ions.

-!- ENZYME REGULATION: Activated by micromolar concentrations of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 136; DB 1; Length 714; 100.0%; Pred. No. 2.5e-09;
      SUBCELLUTAR LOCATION: Cytoplasmic; Translocates to the membrane upon Ca++ binding (By similarity).
TISSUE SPECIFICITY: Ubdilitous.
SIMILARITY: Belongs to peptidase family C2.
SIMILARITY: Contains 1 Calpain catalytic domain.
SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
calcium and inhibited by calpastatin.

-!- SUBUNIT: Heterodimer of a large (catalytic) and a small (regulatory) subunit.

-!- SUBCELLULAR LOCATION: Cytoplasmic; Translocates to the plasma membrane upon Ca++ binding (By similarity).

-!- SIMILARITY: Belongs to peptidase family C2.

-!- SIMILARITY: Contains 2 EP-hand calcium-binding domains.

-!- CAUTION: Ref. 2 sequence differs from that shown due to a frameshifts in positions 582 and 617.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 716;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-OCT-2000 (TrEMBLrel. 15, Created)

TISSUE SPECIFICITY: Ubiquitous.
SIMILARITY: Belongs to peptidase family C2.
SIMILARITY: Contains 1 Calpain catalytic domain.
SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and mouse cDNA sequences.";

1. Converse and integrated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.

1. CATALYTIC ACTIVITY: Broad endopeptidase specificity.

1. COFACTOR: Binds 3 calcium ions (By similarity).

1. ENZYME REGULATION: Activated by micromolar concentrations of calcium and inhibited by calpastentin.

2. SUBUNIT: Forms a heterodimer with a small (regulatory) subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- SUBCELLULAR LOCATION: Cytoplasmic; Translocates to the plasma membrane upon Ca(2+) binding (By similarity).
-!- TISSUE SPECIFICITY: Ubiquitous.
-!- SIMILARITY: Belongs to peptidase family C2.
-!- SIMILARITY: Contains 1 calpain catalytic domain.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases

T **Primary sequences of rat mu-calpain large and small subunits are, respectively, moderately and highly similar to those of human.";

**Elechim. Biochys. Acta 1309:37-41(1996)

- Catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.

- CATALYTIC ACTIVITY: Broad endopeptidase specificity.

- CATALYTIC ACTIVITY: Broad endopeptidase specificity.

- CATALYTIC ACTIVITY: Broad endopeptidase specificity.

- CATALYTIC ACTIVITY: Broad endopeptidase specificity.

- CATALYTIC ACTIVITY: Broad endopeptidase specificity.

- CATALYTIC FOTTON: Activated by mirromolar concentrations of calcium and inhibited by calpastatin.

- SUBDNIT: Forms a heterodimer with a small (regulatory) subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota, Merazoa; Chordata, Craniata, Vertebrata, Euteleostomi,

                                                                 -I- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.
-!- CATALYTIC ACTIVITY: Broad endopeptidase specificity.
-!- COFACTOR: Binds 3 calcium ions (By similarity).
-!- BNZNMR REGULATION: Activated by micromolar concentrations of calcium and inhibited by calpastatin.
-!- SUBENIT: Forms a heterodimer with a small (regulatory) subunit
                                                                                                                                                                                                                                                                      -1-SUBCELLUIAR LOCATION: Cytoplasmic; Translocates to the plasma membrane upon Ca(2+) binding (By similarity).
-1-TISSUE SPECIFICITY: Ubjultous.
-1-SIMILARITY: Belongs to peptidase family C2.
-1-SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Domain IV.
Ancestral calcium site 1 (Potential)
EF-hand 2.
EF-hand 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ancestral calcium site 4 (Potential)
Ancestral calcium site 5 (Potential)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Synool

Synool

Synochetical protein slr0787 - Synechocystis sp. (strain PCC 6803)

C;Species: Synechocystis sp.

C;Species: Synechocystis sp.

C;Species: Synechocystis sp.

C;Avariety: PCC 6803

C;Accession: S77001

C;Accession: S77001

C;Accession: Synool

C;Accession: Synool

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     spleen and heart.

DevELOOPMENTAL STAGE: Found diffusely on the lateral membranes of Sertoli calls in the early prepubertal period. With development, became gradually concentrated at the most basal regions of Sertoli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
-!- PTM: Phosphorylated (By similarity).
-!- SIMILARITY: Belongs to the ELL / occludin family.

Throc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

I Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

I Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

I SUBCITION: U.S.A. 100-1101 (2000).

I SUBCELLULAR LOCATION: Integral membrane protein.

I SUBCELLULAR LOCATION: Integral membrane protein.

I SUBCELLULAR LOCATION: Integral membrane protein.

I SUBCELLULAR LOCATION: Integral membrane protein.

I SUBCELLULAR LOCATION: Integral membrane protein.

I SUBCELLULAR LOCATION: Integral of the tight junction of the tight junction of the tight junction of the tight junction of the tight junction of the tight junction (By similarity).

I SUMILARITY: Belongs to the ELL / occludin family.

"Possible involvement of phosphorylation of occludin in tight junction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           J. Cell Biol. 137:1393-1401(1997).
-!- FUNCTION: May play a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier. Interacts with ZO-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SUBUNIT: Interacts with VAPA (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells.
-!- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
-!- PTM: Phosphorylated. Less-phosphorylated forms are found in basolateral membrane, cytosol and tight junction. More-heavily phosphorylated forms are concentrated exclusively in tight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Canis familiaris (Dog).

--- DOMAIN: The C-terminus is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
--- PTM: Phosphorylated.
--- SIMILARITY: Belongs to the ELL / occludin family.
                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleosto
